

## **Proteostasis Therapeutics to Present at 11th Annual BIO Investor Forum**

October 8, 2012 5:17 PM ET

**Cambridge, Mass., October 8, 2012** — Proteostasis Therapeutics, Inc., a company developing novel therapeutics that regulate protein homeostasis to improve outcomes for patients with neurodegenerative and orphan diseases, announced today that Mark J. Enyedy, Chief Executive Officer, will present at the 11th Annual BIO Investor Forum on Tuesday, October 9, 2012 at 11:00 a.m. Pacific Time at The Palace Hotel in San Francisco, California.

### **About Proteostasis Therapeutics**

Proteostasis Therapeutics is developing disease-modifying therapeutics for orphan and neurodegenerative diseases. The Company's lead programs in Cystic Fibrosis (CF) and protein aggregation disorders such as Parkinson's disease modulate protein chaperone and proteasomal degradation pathways within the cell. These pathways are part of the cellular 'quality control' machinery, called the protein homeostasis network or Proteostasis Network (PN) that regulates protein folding, trafficking, and clearance. By enhancing the function and capacity of the PN, the Company's product candidates correct for imbalances in the PN resulting from the cumulative effects of disease, genetic mutations, environmental factors, and aging.
